

We design, install, certify, and manage highly engineered customized wireless networks that deliver optimum reliability and performance. Our WiFi networks provide the foundation for current and future highly demanding WiFi-enabled services.

✓ HIGHLIGHTS

- ✓ Secured connections via WPA-2
- ✓ Post-deployment heatmap
- ✓ Performance validations
- ✓ 24/7 network monitoring and management
- ✓ Guest/User device support

✓ DESIGN AND CERTIFICATION

We design custom WiFi solutions that ensure optimal wireless coverage and data throughput a customer location or property. Our engineers conduct a site survey and consider specific customer preferences, priorities, and requirements in designing an ideal solution. Upon completion of system installation, a test is conducted in order to validate the WiFi solution design and ensure comprehensive as-built performance. An as-built coverage and performance report is generated to certify the network.

✓ MONITORING & MANAGEMENT

Our WiFi networks are monitored and managed 24/7 by technicians in our Network Operation Center. The advanced skillsets, systems, tools utilized by the NOC provide fast incident recognition and problem resolution.

✓ MANUFACTURERS

we have special partnering relationships with our preferred WiFi vendors:
